MicroDoc Position Paper
Java Executive Committee

MicroDoc is technology oriented software development business with its headquarter in Munich Germany and subsidaries in Stuttgart and Berlin. The company was founded 1991 and has focused on software platforms and software infrastructure. The first generic MicroDoc product (MPF) was a sophisticated ORM framework for object oriented programming languages like Smalltalk and Java. MPF was integrated into a third party EJB server as the persistence layer for container managed persistence. MicroDoc continues to work in the Java Enterprise space with large financial institutions.

Since 2000 MicroDoc has supplied embedded Java VMs to a worldwide customer base and has developed extensive domain know how in the telematics and automotive space. MicroDoc is a long time supporter of open standards and commercially usable open source software. As a member of the Eclipse Foundation MicroDoc has contributed a 2D vector graphic implementation of the OpenVG standard to the eRCP project. MicroDoc'ss managing director was elected to the Eclispe Board of Directors by the Eclipse membership at large as a representative for the Solution Members four years in a row.

MicroDoc, which is a member of the Data Respons Group, holds a ratified seat in the JCP EC since 2014 and has decided to run for the next election period to foster the development and growth of Java in the IoT eco system, where a variety of hardware architectures and operating systems require flexible adoption of the Java technology, while maintaining adherence to the Java standards must be guaranteed.
