JSR 352 Expert Group Meeting
March 9th, 2012
Minutes

Meeting Time: 9-10:00AM ET

Attendees:

Tim Fanelli
Mahesh Kannan
Wayne Lund
Simon Martinelli
Michael Minella
Joe Pullen
Chris Vignola

References: EGAgenda-9Mar2012 (slides)

Discussion Summary:

- The group reviewed events and listeners one further time and concluded that a class level annotation exclude the ability to exploit DI. This realization appears to move the group into accepting listener specification as a field level annotation. Tim Fanelli further noted this approach offers a consistency that follows the approach already proposed for step/reader/writers.

- The group then discussed repeat/retry/skip.   The following general observations where made by various individuals:
    - Repeat is more something that @Process* callbacks do, rather than an explicit entity.
    - Retry and skip listeners do not appear necessary.   We will validate this proposition further during spec review.
    - We need to discuss the concept of policies at a future meeting.   E.g. repeat policy, retry policy, etc. The implication is there may be a need for packaged, reusable logic to determine whether to repeat, retry, skip.   More on this in a future meeting.

- The group meets again on Wednesday, 14 March 2012. The main topic of discussion will be parallel annotations.

Submitted,

Chris Vignola
