
IP Working Group Report

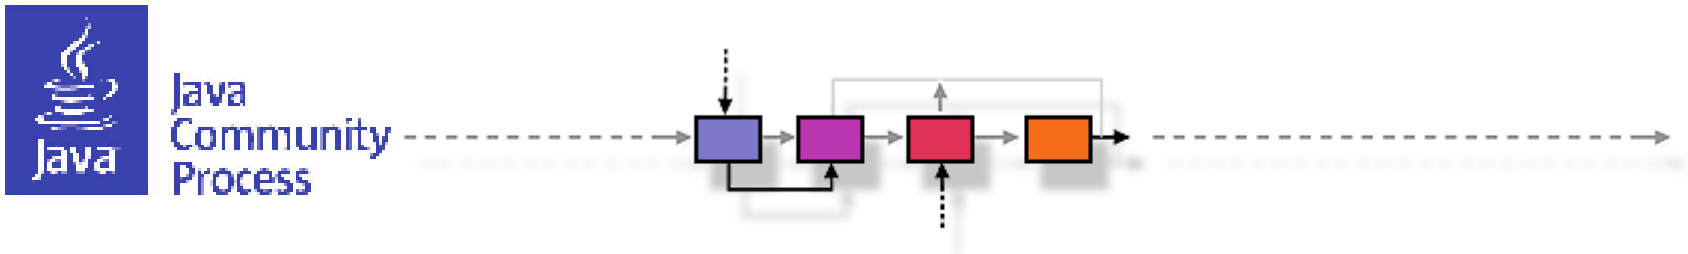
April 15, 2014

The IP-flow document

- We received feedback from Red Hat, CloudBees, Fujitsu, and IBM.
- The document has been passed to Oracle Legal for review.
- We hope to have feedback from them for discussion at the May f2f meeting.

Jim Wright's license proposal

- At the January f2f meeting Jim Wright proposed a new "permissive" license to be used for licensing RIs instead of the Apache or Eclipse licenses.
- At that meeting he promised that we would circulate the full text of the proposed license to EC members "as soon as possible".
  - See link to the license in the agenda for this meeting.
- Since GPL-compatibility and OSI approval are prerequisites for this proposal to succeed Jim has discussed the license with the Eben Moglen from the FSF and with Eclipse; last week he submitted the license for OSI approval.
  - No red-flags have been raised so far.



Thank You!
